Products Rated Highly by Evaluators in CR Clinical Trials

**Doctor Specialty Rapid Cart**

**Ergonomic Products**

$849/Cart *(MDF top)*

$1,049/Cart *(Corian top)*

Cart Designed to Contain all Equipment and Supplies for Specific Procedures

The Doctor Specialty Rapid Cart has the capacity to support two or three devices as well as a broad work surface for procedure delivery. Standard features:

- Wiring apertures on work surface, with stainless steel cover plates
- Five outlet power strip mounted on rear
- Velcro cord management loop
- Two side aperture wiring openings
- Adjustable shelf
- Milled indent on work surface for small items
- Two deep drawers

99% of users stated that Rapid Cart Systems increased treatment efficiency. 97% rated the system as durable; 99% as functional. Main procedures accomplished by users of rapid cart(s): 80% endodontics, 59% implants, 43% oral surgery, 28% prosthetic impressions, and 22% orthodontics.

**CR CONCLUSIONS:** After their experience, 95% of user/owners would purchase Doctor Specialty Rapid Cart(s) again. 97% would recommend this concept to colleagues.
What is CR?

WHY CR?
CR was founded in 1976 by clinicians who believed practitioners could confirm efficacy and clinical usefulness of new products and avoid both the experimentation on patients and failures in the closet. With this purpose in mind, CR was organized as a unique volunteer purpose of testing all types of dental products and disseminating results to colleagues throughout the world.

WHO FUNDS CR?
Research funds come from subscriptions to the Gordon J. Christensen Clinicians Report®. Revenue from CR’s “Dentistry Update” courses support payroll for non-clinical staff. All Clinical Evaluators volunteer their time and expertise. CR is a non-profit, educational research institute. It is not owned in whole or in part by any individual, family, or group of investors. This system, free of outside funding, was designed to keep CR’s research objective and candid.

HOW DOES CR FUNCTION?
Each year, CR tests in excess of 750 different product brands, performing about 20,000 field evaluations. CR tests all types of dental products, including materials, devices, and equipment, plus techniques. Worldwide, products are purchased from distributors, secured from companies, and sent to CR by clinicians, inventors, and patients. There is no charge to companies for product evaluations. Testing combines the efforts of 450 clinicians in 19 countries who volunteer their time and expertise, and 40 on-site scientists, engineers, and support staff. Products are subjected to at least two levels of CR’s unique three-tiered evaluation process that consists of:

1. Clinical field trials where new products are incorporated into routine use in a variety of dental practices and compared by clinicians to products and methods they use routinely.
2. Controlled clinical tests where new products are used and compared under rigorously controlled conditions, and patients are paid for their time as study participants.
3. Laboratory tests where physical and chemical properties of new products are compared to standard products.

Clinical Success is the Final Test

CRA Foundation® changed its name to CR Foundation® in 2008.

THE PROBLEM WITH NEW DENTAL PRODUCTS.
New dental products have always presented a challenge to clinicians because, with little more than promotional information to guide them, they must judge between those that are new and better, and those that are just new. Because of the industry’s keen competition and rush to be first on the market, clinicians and their patients often become test data for new products.

Every clinician has, at one time or another, become a victim of this system. All own new products that did not meet expectations, but are stored in hope of some unknown future use, or thrown away at a considerable loss. To help clinicians make educated product purchases, CR tests new dental products and reports the results to the profession.
