- Tilt Bins (not included) under unit allows for quick and customizable arrangement of materials.

OPTIONAL FEATURES

TILT BIN - OPTIONS

5 SLOT

6 SLOT

9 SLOT

3 – FRAMING

During the framing process, a 2"x 6" or equivalent cabinet blocking should be installed at 54" above the finished floor and again at 102" above the finished floor. This will provide necessary support for your Pulldown.

4 – INSTALLATION

1. Position the bottom of the cabinet 54" above the finished floor, or align tops with adjacent cabinets where indicated on the elevation. This height is required for proper use of the pulldown fixture.
2. Make sure unit is level.
3. Using six #8x2-1/2" screws, secure the cabinet into the cabinet blocking through the cleats of the cabinet as shown in Fig. 3.1. Use three screws along the top, and then three along the bottom.

4 – INSTALLATION cont'd

INSTALLATION WITHOUT CABINET BLOCKING:

Although it is our recommendation to install the Triple Pulldown using the cabinet blockings, it is possible to install without them.

1. Position the bottom of the cabinet 54" above the finished floor centering the cabinet horizontally over two (2) studs. This will allow for proper spacing.
2. Make sure the unit is level.
3. Secure the cabinet using six (6) #8x 2-½" screws into the studs with three (3) screws spaced evenly down the left side and three (3) screws spaced evenly down the right side.

5 – INSTALLATION FOR TILT BIN *OPTIONAL*

1. Remove tilt bin from packaging
2. Using supplied screws (four (4) #6 x 5/8" philips-head screw), attach tilt bin frame to the back of the wall and up against the bottom of the cabinet.
3. Installation complete.

Tilt Bin

Tilt Bin is mounted to wall and
is up against the bottom of the
cabinet
